

Data Analytics and Visualisation (COM725)

Project (Software Product and Technical Report)

**Predicting Maternal Mortality Using
Ensemble Learning and SHAP-Based
Interpretability:
A Data-Driven Decision Support
Approach**

Name & Student Number
Partha Pratim Mazumder (Q103063737)

Module Leader: Raza Hasan

SOLENT UNIVERSITY SOUTHAMPTON

Contents

1	Introduction	1
2	Literature Review	1
2.1	Primary Causes of Maternal Mortality	1
2.2	Demographic and Socioeconomic Risk Factors	1
2.3	Healthcare Utilization and System Readiness	1
2.4	Gender Disparities in Care	1
3	Methodology	1
3.1	Dataset Description	1
3.2	Data Integration and Preprocessing	1
3.3	Feature Engineering	1
4	Exploratory Data Analysis	1
4.1	Univariate Analysis	1
4.2	Bivariate Analysis	2
4.3	Multivariate Exploratory Analysis	2
5	Machine Learning Modeling	2
5.1	Modeling with Undersampling	2
5.2	Modeling with Oversampling	2
6	Model Interpretability using SHAP	2
6.1	Global Feature Importance	2
6.2	Local Explanation of Individual Predictions	2
6.3	Distribution of Feature Effects	2
6.4	Interpretability Summary	2
7	Modelling and Evaluation	2
7.1	Model Performance and Results	2
8	Tableau Dashboard Design	3
8.1	Dashboard Components and Insights	3
8.2	Analytical Value and Decision Support	3
9	Discussion	3
10	Conclusion	3
	References	4
	Appendix	5

1 Introduction

This section is intentionally left as a placeholder.

2 Literature Review

2.1 Primary Causes of Maternal Mortality

This section is intentionally left as a placeholder.

2.2 Demographic and Socioeconomic Risk Factors

This section is intentionally left as a placeholder.

2.3 Healthcare Utilization and System Readiness

This section is intentionally left as a placeholder.

2.4 Gender Disparities in Care

This section is intentionally left as a placeholder.

3 Methodology

3.1 Dataset Description

This section is intentionally left as a placeholder.

3.2 Data Integration and Preprocessing

This section is intentionally left as a placeholder.

3.3 Feature Engineering

This section is intentionally left as a placeholder.

4 Exploratory Data Analysis

4.1 Univariate Analysis

This section is intentionally left as a placeholder.

4.2 Bivariate Analysis

This section is intentionally left as a placeholder.

4.3 Multivariate Exploratory Analysis

This section is intentionally left as a placeholder.

5 Machine Learning Modeling

5.1 Modeling with Undersampling

This section is intentionally left as a placeholder.

5.2 Modeling with Oversampling

This section is intentionally left as a placeholder.

6 Model Interpretability using SHAP

6.1 Global Feature Importance

This section is intentionally left as a placeholder.

6.2 Local Explanation of Individual Predictions

This section is intentionally left as a placeholder.

6.3 Distribution of Feature Effects

This section is intentionally left as a placeholder.

6.4 Interpretability Summary

This section is intentionally left as a placeholder.

7 Modelling and Evaluation

7.1 Model Performance and Results

This section is intentionally left as a placeholder.

8 Tableau Dashboard Design

8.1 Dashboard Components and Insights

This section is intentionally left as a placeholder.

8.2 Analytical Value and Decision Support

This section is intentionally left as a placeholder.

9 Discussion

This section is intentionally left as a placeholder.

10 Conclusion

This section is intentionally left as a placeholder.
